

1. Setup:

- If the participant does not have Android, we can give them one of our phones for the run.
- Send the app to participants so they can test it. This test can be done virtually on a call, but interviews must still be audio recorded.
- APK link:

https://drive.google.com/file/d/1oFTc2jxim9KDpvnnn9Lm79ii5EuVJtiA/view?usp=share_link

2. Record sound from interviews:

3. Interview before run:

Age:

1. Do you consent to your answers being used in our project?
2. How often do you engage in physical activity such as running, walking or cycling?
3. Are you as physically active as you would like to be?
4. Do you always run/walk the same routes?
5. What factors do you take into account when choosing your routes?
6. Do you use a navigation tool for your trips?

4. They use the app:

- Tell them that selecting more POIs means a longer route.
- Ask them to choose one or more POIs to run to.
- We can follow them on the route, but it is not necessary.

5. After run, have them complete the SUS questionnaire:

6. Interview after the run:

1. How did route generation feel?
2. Did this app motivate you to run/walk?
3. How was navigating to the different POIs?
4. How was it to use the phone to navigate?
5. Compared to when you normally run/walk, how was this experience?
6. What did you like best about this route?
7. Would you continue to use this route or would you generate a new route next time?
8. How would you describe this app to a friend?
9. Is there any glaring functionality that you think this app lacks?
