

Go Explore!

What is it?

Go Explore! is a mobile application which generates routes based on nearby points of interest (POI) and user preference.

Explore your neighborhood and share your findings with your friends!

How is it done?

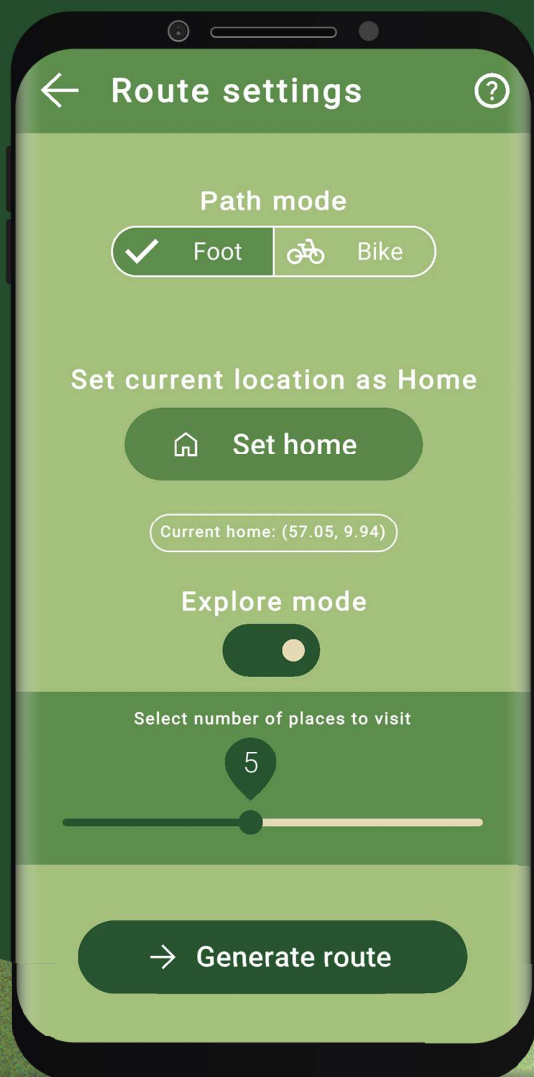

The application is created with **Unity** and written in **C#** and uses the following API's:

OpenRouteService - Route generation and POI's
Google Places - Images for points of interest
Supabase - Database for storing route ratings
Python Anywhere - Visualized route maps

Pick between **Explore Mode** and **Filter Mode**

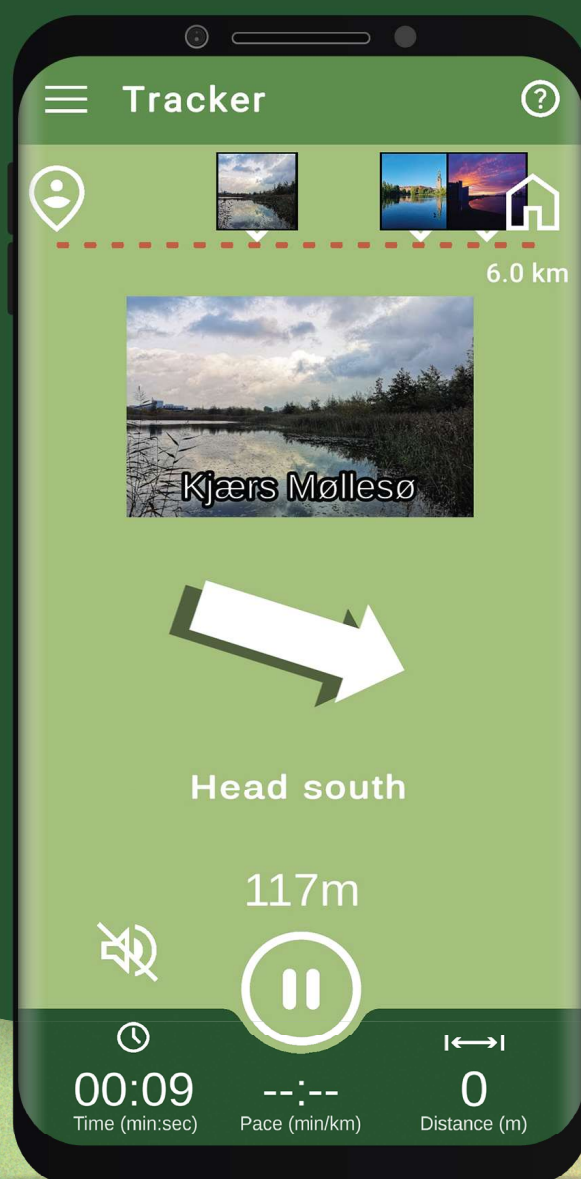

Explore Mode

Select a number of places to visit and the route will include the most popular locations among our user base.

Navigation

After creating a route, simply follow the arrows and directions provided by the app. Keeps track of your time and pace.

Filter Mode

Choose your favorite categories, and the app will present you with a selection of points of interest to choose from.
